## Fascinating sewage treatment factory

After this visit, we deeply learn the methods to purify the sewage and water from Dong Jiang such as sedimentation and adding some special chemicals into the water. It is more tangible and exciting to visit a real water treatment factory rather than just learning the knowledge from the book. Therefore, we can learn in our daily life and broaden our horizons. However, it is a regret that we cannot visit the laboratory in the factory, hope we can visit it next time. Lastly, we have to say that the purified water in the factory is delicious!
