Reflection

The Ma On Shan Sewage Treatment Work is where our water come form. I was shocked by a simplified picture which tells how each system work since there many parts! Each part also plays an important role. If I now understand how hash a water producing process was, I should better make good use of each droplet of water.

In the afternoon, we have attended a talk about drugs making and also, visited the CUHK Chemistry Laboratories. Although I didn' t understand much about the contents in the talk, I Knew making a drug that can really cure a person, is a very and very difficult job. It may take more than 10 years! For sure I am interested in it but I challenge myself whether I can face sure a lot failures. I better study well my Chemistry first!
