Treasure the water

It is just a simple thing to get the clean water by opening the tap in our home while it is involving the great effort paid by government and the department of water treatment. On the government side, the policy about buying water from mainland china involving opportunity cost in it. Since the water is necessity, the money which buys the water cannot be saved. On the department of water treatment side, it needs to divide the process of water treatment into many parts in order to make sure we can drink the clean water without any impurities. What I want to say is we need to treasure the water as clean water is a invaluable resources. It may become a thing that you cannot buy by money in one day.
