

4D Chan Chi Chiu & 4D Hui Tsz Him

After visiting the sewage treatment works, we enhance our knowledge about the operation of the system. Every procedure is very cautious. Moreover, we know the work of sewage treatment works not only purify the water, but also need to make some precautions to avoid flooding. The devices in there are quite flexibility because it had enough pools to place the sewage. The site choosing is deserved because they had considered to the environment, the sewage after purification will be pass to the middle of the sea.

At first, I had an ill impression towards the trip as it deals with large amount of sewage which disgusting smell. When we arrived there, a talk about the process of purification of sewage was prepared. Gradually, I had a more clear understanding about the industry. The works they do improve the quality of water which is priceless for us and I love ocean too. The only regret was that I haven't visit laboratory there because we are not allowed to go in. I am looking forward the day that can visit it.
