

LWL Sharing (5A and 5C)

<p>WONG LOK YI</p>		<p>After going to the town gas company, I had learnt more about this kind of fuel. My family use town gas every day for cooking, therefore I think it is necessary for me to know more about it. Now I know that town gas has to be transported in high pressure due to friction. additionally, I first came to know that town gas is made up of 50% of hydrogen and it contains a small amount of carbon monoxide.</p>
<p>CHAN KA YU</p>		<p>During the visit, I feel really impressive. Hong Kong Town gas has paid lots of effort to improve its technology and service in order to provide a better living environment to Hong Kong people. The photo I took is the appliance for maintaining the town gas tubes. It is not only safer to the workers but also a more effective way .I hope town gas can have a sustainable improvement which can be beneficial to all Hong Kong people</p>

CHE PUI YU

There are only a few lamps of this type in Hong Kong since most of the road light is operated by electricity nowadays. However, this is operated by town gas.
