CHEUNG WING HANG

The most unforgettable session is the cooking session. Although I think there is no different using two cooking methods, I think this is an interesting experience.

CHIK HIU CHING

This is the Corporate Emergency Control Centre of the Hong Kong and China Gas Company Limited. You can see from the photo that the technicians are monitoring every single gas pipe in buildings and under the ground all around Hong Kong. The large screen there shows the status of the pipes at different locations.

HAU CHING LONG

It is an aerial machine in Town Gas Company which is a new technology for checking the gas pipe outside the building instead of attaching scaffolding to a building.

LEUNG SIN WAI

This is a iron which is powered by town gas. I haven't heard of it before. Actually, I think it look like a cow. Maybe the designer has done a special design on it.

LI MING CHAK

This photo shown a helicopter which is used to determine whether the pipes are safe to use. It is also shown town gas is using more advanced technology.

SO PAK HO

Use Towngas to cook is really clean as it's raw materials of making the gas is 100% naphtha and natural gas, coal is not contain in the composition.

WONG SIU TIN

This photo was taken when we are going to cook the food of using electric stove and flame in order compare the efficiency and the taste of the food.

YIP YIU HANG

Fellow schoolmates were cooking fried fish using town gas and electric power and compared the difference of two sources
